## Projects

### Real Time sports match analysis using APIs | (Python, JavaScript, HTML)

October 2025

The Project presents a real-time sports analytics system that integrates live match APIs to continuously collect, monitor, and evaluate ongoing match data. The system receives event – level information such as scores, and cumulatively stores and analyses it to provide metrics like performance trends. Using real – time data streaming and automated analytics the approach enables faster decision making and sports organization.
